## CENTRAL LIBRARY

Sri Ramachandra Institute of Higher Education and Research has automated its housekeeping operations of the library resources through the Integrated Library Management Software (ILMS), developed by SRIHER in-house software team. Faculty, staff, Researchers and students have the facility to access the online content subscribed by the resource centre in and out of the campus at any time anywhere and all the days. The LMS software enables library staff to record the holdings of the library resources, manage, tracking movement of stock and to extract the reports. The library keeps registry of the physical presence of the visitors through the biometric readers to account the usage of library. The digital library is equipped desktop systems wherein all the subscribed online contents are made available for access and institute members can access the same in all the electronic devices available with them through the Wi-Fi facility enabled in the library premises. Clinicians can access evidence-based databases through mobile apps. RFID (Radio Frequency Identification) technology has been implemented in the library where all learning resources have been tagged to find the movement of the same and the loss of the library resources are minimised and more over stock verification can be carried out with rapid speed with lesser time. Library resources are updated then and there and made available to all the users and orientations and workshops are conducted to update the latest field of knowledge in the medical and allied health sciences field.

The detailed availability of resources and the library budget is provided in the following statement
